

Andgar's 2019 Automatic Flat Stacker

Andgar's new Flat Stacker for the 2019 blueberry and blackberry harvest season is the most efficient way to get your flats back to the fields.

Instead of laborers hand stacking individual wet flats, our stacker automatically stacks flats from the top-down into 22-unit stacks, which can easily be slid on to a pallet and moved out of your berry processing facility.

The Andgar Advantage

- Tested under live processing facility conditions for performance
- Simple, programmable logic controller for reliability and data feedback
- Positive stacking mechanism to prevent minor abnormalities or warping
- Reduce the need for manual labor and labor liability
