

# Andgar's Rock Trap For Berries

Just like a car goes through an automatic car wash, our rock trap cleans off all the dust, dirt and debris from the conveyor of blueberries and strawberries.

Water flows over the berries while heavy objects like rocks get trapped in the flumes for removal. Once they are cleaned, berries are dried off along our adjustable dewatering conveyor.

## The Andgar Advantage

- Self-cleaning
- Constructed with sanitary stainless steel
- Customizable with extra flumes for better coverage
- Removable flumes make it easy to dispose of rocks and debris
