

Andgar's Palletizing Robot

Our Kawasaki automatic palletizer machine increases the speed and throughput of your operation because it requires almost no labor.

Other than the on/off switch, everything is automated. The pallet robot is pre-programmed to automatically adjust to any size box, weight, pallet or application.

The palletized load system can create pallet stacks over ten feet tall and can reach over incoming and outgoing production lines with a seven-foot horizontal range.

Reduce your labor costs and see your product throughput and return on investment multiply.

The Andgar Advantage

- Kawasaki preferred integrator
- Complete installation to fit your facility's footprint
- Robot programming
- 24/7 service
